

T8 LED Tube Light with Motion Sensor

T8 LED tube light with integrated radar sensor for motion detection. Designed as a direct replacement for traditional fluorescent tubes, offering energy efficiency and long lifespan.

Product Overview

Smart Energy-Efficient Lighting

This T8 LED tube light serves as a high-efficiency, direct replacement for traditional fluorescent tubes. Integrated with advanced radar motion detection, it ensures lights activate only when occupancy is detected, significantly reducing operational energy costs. It is perfectly suited for high-traffic areas such as corridors, stairwells, parking garages, and commercial warehouses.

Technical Specifications

Light Source	LED
Form Factor	T8
Sensor Technology	Integrated Radar Sensor

Features & Applications

Recommended Usage

- Corridors
- Stairwells
- Parking Garages
- Warehouses
- Office Buildings

Key Benefits	Energy Efficient, Motion Activated, Direct Fluorescent Replacement, Long Lifespan, Anti-Metal Interference
--------------	--

Installation Notes

Radars Sensor Installation

For optimal performance of the integrated radar sensor, ensure there are no metal obstructions placed directly in front of the planar antenna. The sensor is engineered to minimize interference, but proper positioning relative to metallic surfaces is necessary to maintain accurate detection capabilities.
