

# Tapered Drill Rod for Rock Drilling

Taper drill rod is used for rock drilling and blasting holes. It is suitable for drilling works in quarries, coal mines, traffic and other construction applications.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Tapered Drill Rods

These robust tapered steel rods are engineered specifically for efficient rock drilling and pilling operations in demanding mining environments. Designed to withstand rigorous operational conditions, they provide exceptional durability and precision for optimal drilling results. These tools are compatible with a variety of rock drilling machinery, ensuring reliable performance and extended service life.

## Technical Specifications

### Primary Applications

- Rock Drilling
- Pilling Operations
- Mining Industry

### Available Shank Sizes

22\*108mm, 25\*108mm

### Design

Tapered steel rod

## Quality & Compliance

### Certifications

ISO Certified
