

Tapered Roller Bearing

This tapered roller bearing is designed to manage high radial and axial loads. It features robust construction with precision-engineered rollers and raceways for smooth operation and extended service life.

Product Overview

High-Performance Tapered Roller Bearing

This precision-engineered tapered roller bearing is designed to efficiently manage high radial and axial loads simultaneously. With a robust construction utilizing high-quality rollers and raceways, it ensures smooth operation and an extended service life in demanding environments. It is an ideal solution for a diverse range of applications, including automotive systems, industrial equipment, and heavy machinery.

Technical Specifications

Key Features

- Precision-engineered raceways
- Robust roller construction
- High load capacity
- Designed for smooth operation

Load Capability

Radial Load, Axial Load

Application

Suitable Industries

Automotive • Industrial • Heavy Machinery
