

Tapered Roller Bearing

These high-precision tapered roller bearings are designed for optimal load distribution and enhanced durability. They are suitable for demanding industrial and automotive applications.

Overview

High-Precision Tapered Roller Bearings

These high-precision conical roller bearings are engineered for optimal load distribution and exceptional durability. Designed to withstand both radial and axial loads in demanding industrial and automotive environments, they ensure smooth and reliable operation. Their robust construction makes them an ideal choice for applications requiring consistent performance under pressure.

Technical Details

Bearing Type

Tapered Roller • Conical

Series Designation

30000

Performance

Load Capability

Radial Load Support, Axial Load Support
