

Tapered Roller Bearing

This precision-engineered tapered roller bearing is designed for high load capacity and efficient operation in demanding applications. It provides smooth and reliable performance with minimal friction and wear, making it suitable for various industrial and automotive uses.

Product Overview

Precision Tapered Roller Bearings

These precision-engineered tapered roller bearings are designed to provide high load capacity and efficient operation in demanding industrial environments. Constructed with hardened steel races and precision-ground rollers, they ensure smooth, reliable performance with minimal friction and wear. Ideal for applications such as gearboxes, automotive axles, and heavy machinery, these bearings are built for extended service life and optimal operational efficiency.

Technical Specifications

Available Series	6306, 6307, 6308, 30211
Bearing Type	Tapered Roller Bearing

Applications

Typical Applications

- Electric Motors
- Water Pumps
- Power Tools
- Mining Machinery
- Agricultural Equipment
- Construction Machinery
- Gearboxes
- Automotive Axles

Performance Features

Performance Highlights

1 Low

Friction Level

1 High

Load Capacity
