

Target Object Series for Sensor and System Testing

This comprehensive target object series is designed for sensor and system testing. The modular assembly allows for convenient installation and provides realistic responses for various sensor systems.

Overview

Comprehensive Testing Ecosystem

This target object series represents the most comprehensive ecosystem chain in the industry, specifically engineered for sensor and system testing. Designed for high-fidelity simulation, these objects provide realistic responses for Radar, Lidar, Camera, and IR systems. The modular assembly ensures convenient installation, while the optimized structural design offers excellent collision-resistance performance for repeated use in demanding testing environments.

Compliance & Standards

Industry Standards

ENCAP, CNCAP, IVISTA, ISO

Capabilities

Supported Testing Systems

- Radar Systems
- Lidar Systems
- Camera Systems
- IR Systems

Metrology Quality

ISO Aligned • Used by Top 5 Testing Institutions

Product Features

Design Highlights

- Modular assembly for easy installation
- Optimized structural design
- Excellent collision-resistance performance
- Realistic response characteristics
