

TDC Flange Former for HVAC Ductwork

This TDC flange forming machine efficiently produces TDC (Transverse Duct Connector) flanges for HVAC ductwork. It automates flange profile forming on sheet metal, ensuring consistent quality and reducing labor costs.

Overview

Professional TDC Flange Solution

This TDC flange forming machine is engineered for the precise and efficient production of Transverse Duct Connectors used in HVAC ductwork. It automates the profile forming process on sheet metal to ensure consistent, high-quality results while significantly reducing manual labor requirements. Built with a robust construction for long-term reliability, it provides an essential solution for high-volume rectangular duct manufacturers.

Key Features

Machine Highlights

- Automated TDC profile forming
- Robust construction for durability
- Integrated operator safety systems
- Intuitive control panel for parameter adjustments

Industry Application

HVAC Ductwork, Rectangular Duct Production, Sheet Metal Processing
