

Tea and Juice Washing Filling Capping Machine

This 3-in-1 hot filling system is designed for processing tea, juice and functional drinks. It integrates washing, filling, and capping functions into one machine.

Product Overview

Integrated Hot Filling Solution

This 3-in-1 hot filling system is engineered specifically for the production of tea, juice, and functional beverages. The system combines washing, filling, and capping into a single, high-automation process to prevent secondary pollution and ensure high precision. Designed for flexibility, the machine accommodates various bottle materials like PET and glass, requiring only minor part exchanges to switch between formats.

Technical Specifications

Core Functions

- Bottle washing
- Hot filling
- Capping

Compatible Bottle Materials

PET, Glass

Operational Highlights

Key Performance Indicators

3 in-one

Functions Combined

System Capabilities

High Filling Precision • Low Material Loss • Rapid Changeover • Automated Process
