

Telecommunication Cables

These telecommunication cables facilitate reliable data and voice transmission. They come in shielded and unshielded options with multiple insulated conductors.

Product Overview

Versatile Telecommunication Connectivity

These professional-grade telecommunication cables are engineered for reliable voice and data transmission in both commercial and residential environments. Featuring multi-conductor designs with precise insulation, they ensure stable signal integrity across complex network infrastructures. Options include shielded and unshielded variants, allowing for tailored interference management based on specific installation requirements.

Technical Specifications

Primary Applications

- Commercial Telephone Systems
- Residential Telephone Networks
- Data Transmission
- Signal Path Management

Conductor Configuration	Multi-conductor insulated assembly
Shielding Variants	Shielded, Unshielded
