

Telescope with Tripod and Finder Scope

This telescope is mounted on an adjustable tripod for stable viewing. It features a finder scope to help locate objects in the night sky or distant landscapes.

Product Overview

Professional Optical Observation

This versatile telescope is engineered for clarity and precision, making it an ideal choice for both celestial observation and terrestrial landscape viewing. Featuring an adjustable tripod and an integrated finder scope, it allows users to locate and track distant objects with ease. Its durable construction and magnification capabilities provide a reliable tool for amateur astronomers and nature enthusiasts alike.

Technical Specifications

Included Components

- Main telescope tube
- Black lens hood
- Finder scope
- Adjustable tripod

Key Design Features

Precise Aiming Mechanism • Adjustable Tripod Legs • High-Clarity Optics

Target Applications

Astronomy, Landscape Observation, Terrestrial Viewing
