

Telescopic Articulating Material Handler

This telescopic articulating material handler is designed for lifting and maneuvering materials. Its telescopic boom extends for increased reach, while articulating joints allow for precise positioning.

Product Overview

Versatile Material Handling

This telescopic articulating material handler is an advanced solution designed for precise maneuvering and lifting of materials across varied heights and angles. Built upon a heavy-duty truck chassis, the equipment offers superior mobility and is equipped with robust outriggers to ensure maximum stability during heavy-duty operations. It is an ideal asset for construction, maintenance, and utility professionals requiring reliable reach and versatility.

Technical Features

Key Capabilities

- Telescopic boom for extended reach
- Articulating joints for precise positioning
- Heavy-duty truck chassis integration
- Integrated material bucket
- Stability-focused outrigger system

Stability System

Outriggers • Heavy-duty Chassis

Applications

Suitable Industries

Construction, Utility Infrastructure, Industrial Maintenance
