Television Main Motherboard

This is a main motherboard for televisions. It provides power supply and signal processing capabilities.

Product Overview

Professional Television Main Motherboard

This television main motherboard serves as the central control and power processing unit for display systems. It integrates essential power supply management with high-performance signal processing circuitry. Designed with a blend of through-hole and surface-mount components, it ensures reliable operation and consistent signal delivery for integrated television hardware.

Technical Specifications

Design Architecture

- Integrated power supply unit
- Signal processing architecture
- Hybrid through-hole and SMT construction

Component Integration	Capacitors, Resistors, Integrated Circuits, High-voltage Transformer

Connectivity

Interface Connectors

- Power input connectors
- Video signal ports
- Control signal terminals
- Integrated wire harnesses
