

Television Mainboard

The television mainboard is the central processing unit of a TV, controlling its functions. It manages video and audio processing, input/output connectivity, and power management.

Product Overview

Universal Television Mainboard

This high-compatibility television mainboard is designed for 14-21 inch displays, utilizing a reliable Sanyo IC architecture. It provides extensive OSD language support and versatile color system compatibility, making it an ideal replacement component for various international markets. With integrated advanced power protection and multi-functional search capabilities, this board ensures reliable performance and ease of integration.
