

Television Tuner Module

This tuner module is designed for television receivers to receive and demodulate broadcast signals. It converts radio frequency signals into a format that the TV can process to display images and sound, featuring a coaxial connector for antenna input and pins for main board connection.

Product Overview

High-Performance TV Tuner Module

This tuner module is designed for reliable broadcast signal reception and demodulation in television receivers. It efficiently converts radio frequency inputs into data processed by internal circuitry to produce clear images and sound. Featuring a standard coaxial antenna input and integrated main board pins, it serves as a critical component for seamless signal integration.

Technical Specifications

Series	DTTX-5A
Part Identifier	DTTX-5A1/L125
Internal Reference ID	51090304

Connectivity

Antenna Interface	Coaxial Connector
Main Board Interface	Multi-pin headers

Features

Primary Functions

- Radio frequency signal reception
- Signal demodulation
- Audio and video signal conversion
