

Television Yagi-Uda Antenna

This Yagi-Uda antenna is designed for receiving television signals. It features a multi-element array with a reflector, driven element, and multiple directors to enhance signal gain and directivity.

Product Overview

High-Performance TV Reception

This Yagi-Uda antenna is engineered for superior television signal reception in challenging outdoor environments. Utilizing a multi-element array configuration—including a reflector, a driven element, and multiple directors—it maximizes signal gain and directional precision. Constructed from lightweight aluminum with durable plastic components, it offers a reliable solution for clear, high-quality TV signal acquisition.
