

Textile Machine Metal Wire Coil

This metal wire coil is designed for use in textile machinery. Its robust construction and smooth surface finish minimize friction and wear.

Product Overview

High-Performance Textile Machine Wire

This premium metal wire coil is engineered specifically for the rigorous demands of textile machinery, supporting essential processes like weaving, knitting, and spinning. Designed with a robust construction and a smooth surface finish, the wire effectively minimizes friction and wear to enhance operational efficiency. Each coil is precision wound to ensure consistent payout and tangle-free performance, significantly reducing maintenance downtime in professional manufacturing environments.

Technical Specifications

Key Performance Features

- Robust construction for industrial durability
- Smooth surface finish to minimize friction
- Precision winding for consistent payout
- Tangle-free operation

Available Variants

Various Gauges • Multiple Tensile Strengths

Primary Applications

Weaving, Knitting, Spinning
