

Textile Machinery Component

This component is designed for use in textile machinery. It is essential for the manufacturing of apparel and textiles.

Product Overview

Precision Textile Machinery Component

This high-precision textile machinery component is engineered to facilitate seamless operation within apparel and textile manufacturing environments. Designed with specific dimensional tolerances, this part ensures stability and consistent output in industrial machinery applications. Its robust construction supports longevity, making it an essential replacement or integration part for high-demand textile processing workflows.

Technical Dimensions

Dimensional Analysis

Parameter	Description
D	Outer Diameter
d	Inner Diameter
h	Component Height
