

Textile Machinery Components Kit

This kit contains assorted components for textile machinery. It includes circular fabric pieces, plastic tubes, pads, and other small plastic components used in filtering, guiding, or processing textile materials.

Product Overview

Textile Machinery Components Kit

This comprehensive kit contains essential components designed for the maintenance and optimization of textile manufacturing equipment. The collection includes high-quality fabric filters and precision-engineered plastic guiding elements suitable for industrial processing applications. It provides a reliable solution for technicians needing standard replacement parts or material testing samples in textile production environments.

Component Details

Contents List

- Circular fabric filters
- Clear plastic guiding tubes
- Rectangular maintenance pad
- Small plastic structural components

Material Composition

Industrial Textile, Clear Polymer, Synthetic Fiber

Usage Specifications

Primary Applications

Filtration • Material Guiding • Equipment Maintenance • Textile Processing
