

Textile Machinery Control Module

This component is used in textile machinery for control and power distribution. It features a black housing with ventilation slots and connects to electrical cables via a European plug.

Overview

Professional Textile Control Solution

The SKT-103 is a specialized control module designed for integration into industrial textile machinery. Featuring a robust black housing with engineered ventilation, it is built to manage power and control signals in demanding manufacturing environments. This component is equipped with standard European electrical connectivity, ensuring seamless compatibility with established regional machinery infrastructure.

Technical Specifications

Application Areas

- Textile machinery power distribution
- Automated machine control systems
- Industrial equipment regulation

Model Identifier	SKT-103
Design & Build	Ventilated Housing, Industrial Grade, European Standard Plug
