

Textile Machinery Spreading Equipment Component

This component is designed for spreading applications in textile machinery. It features a cylindrical central post and a curved, open housing with a polished finish.

Product Overview

Industrial Precision Component

This high-quality textile machinery spreading component is engineered for reliability and precision in industrial sewing and material distribution environments. Featuring a robust metallic construction and a polished finish, it ensures smooth operation and long-lasting performance. The component is specifically identified as model WD-180, making it an ideal choice for maintenance and upgrade requirements in professional textile production lines.

Technical Specifications

Design Features

- Cylindrical central post design
- Curved, open housing configuration
- Polished metallic finish

Construction

Metallic Construction • Industrial Grade

Model Identification

WD-180

Application

Textile Machinery, Spreading Equipment, Industrial Sewing
