

Textile Machinery Three-Phase Electric Motor

This three-phase electric motor is designed for textile machinery applications. It features a robust construction with a flange mount and cooling fins for efficient heat dissipation.

Product Overview

Industrial Textile Motor

This three-phase electric motor is specifically engineered to meet the demanding requirements of textile machinery applications. Featuring a robust, flange-mounted construction, it ensures secure and stable integration into your production equipment. The motor includes a durable housing with integrated cooling fins to provide efficient heat dissipation during continuous operation, while the accessible terminal box simplifies electrical installation.

Technical Specifications

Motor Configuration	Three-phase
Mounting Type	Flange Mount
Cooling Mechanism	Integrated cooling fins
Operation Mode	Continuous operation

Design Features

Housing and Connectivity

- Durable heavy-duty housing
- External cooling fins
- Integrated electrical terminal box
