

# Textile Machinery Wheel Hub Motor

This high-torque electric wheel hub motor is designed for integration into textile machinery. The motor features a compact, fully enclosed design for protection against dust and debris commonly found in textile environments.

## Product Overview

### High-Efficiency Textile Hub Motor

This high-torque electric wheel hub motor is specifically engineered for textile machinery, offering a streamlined direct-drive solution. Its fully enclosed design ensures reliable performance by protecting internal components from dust and debris typically found in textile manufacturing environments. By eliminating belts and chains, this motor reduces maintenance requirements while maximizing operational efficiency and precision.

## Technical Specifications

### Performance Benefits

- Eliminates belts and chains
- Reduced maintenance requirements
- Improved operational efficiency
- Direct-drive integration

Drive Configuration	Direct-drive wheel hub motor
Control Capability	Variable speed, Precise control
Connection Type	Integrated power and control signal cable

## Construction

### Environmental Protection

Fully enclosed • Dust resistant

Rim Construction	Lightweight alloy
