

Textile Manufacturing Machinery

These machines are used in the manufacturing of textiles. They facilitate various processes in textile production.

Product Overview

Industrial Precision for Modern Textiles

This advanced textile manufacturing machinery is engineered to meet the rigorous demands of modern production environments. Designed for high efficiency and consistent output, it integrates seamless operation with durable construction. It serves as an essential solution for facilities looking to optimize their output quality while maintaining operational reliability.

Operational Metrics

Performance Ratings

95 %

Efficiency Rate

1500 RPM

Operating Speed

Technical Standards

Compliance and Standards

ISO 9001, CE Certified, RoHS Compliant

System Compatibility

Compatible Fabric Types

- Cotton
- Synthetic Fibers
- Blended Yarns
- Wool
