

Textile Manufacturing Machinery

These machines are used in the textile industry for manufacturing fabrics. They facilitate various processes required for textile production.

Overview

High-Efficiency Textile Machinery

This advanced textile manufacturing equipment is engineered for high-speed production and superior fabric quality. It incorporates precision control systems to ensure consistency across various weaving and processing applications. Designed for industrial-scale operations, this machinery provides reliable performance, durability, and optimized output efficiency for professional manufacturing environments.

Key Performance Indicators

Production Capacity

1200 rpm
RPM Speed

98.5 %
Efficiency Rate

Technical Features

Automation

Fully Automated • PLC Controlled

Certifications

ISO 9001, CE Certified

Technical Specifications

Operating Parameters

Parameter	Specification
Power Supply	380V/50Hz
Fabric Width	Up to 340cm
Operating Noise	< 82dB
