

Thermal Fogging Machine for Pest Control

This thermal fogging machine dispenses insecticide, fungicide, and disinfectant solutions in large areas. It generates a dense fog of fine particles using thermal fogging technology for thorough coverage and effective pest control.

ADDITIONAL IMAGES

Overview

High-Performance Thermal Fogging Solution

This thermal fogging machine is a high-performance tool designed for efficient pest control and large-scale disinfection. It utilizes thermal energy to generate a dense fog of fine particles, ensuring wide coverage and deep penetration into hard-to-reach areas. Built with robust stainless steel and featuring a protective perforated shield, it is engineered for durability and operator safety in demanding agricultural and industrial environments.

Performance

Performance Metrics

25 L/min
Spray Volume

Technical Specifications

Construction Material	Robust stainless steel
Fog Output	Adjustable
Power Source	Combustion engine

Applications

Target Sectors

- Agricultural settings
- Industrial environments
- Public health initiatives
- Residential pest control

Compatible Solutions	Insecticides, Fungicides, Disinfectants
----------------------	---

Design & Safety

Safety Features

- Protective perforated shield around engine and exhaust
- Durable metal construction
- Integrated control panel for parameter adjustment

System Components

Solution Tank • Fuel Tank • Control Panel
