

Thermoplastic Bathtub Circulation Pump

This self-priming centrifugal pump circulates water in bathtubs, spas, and hot tubs. The pump features a thermoplastic construction that offers resistance to corrosion and chemicals.

Product Overview

High-Performance Circulation Pump

The BTP single-stage centrifugal pump is engineered specifically for reliable water circulation in bathtubs and spa systems. Constructed with durable thermoplastic suction and discharge mountings, it offers excellent resistance to corrosion and chemicals. Featuring an asynchronous motor with thermal protection and IP55 protection, this pump is designed for continuous, quiet, and safe operation in both residential and commercial settings.

Applications

Bathtubs, Spas, Hot Tubs, Residential, Commercial

Construction Materials

Material Specifications

Component	Material
Suction/Discharge Mountings	Polypropylene
Motor Shaft	Stainless Steel AISI 420
Impeller	PPO
Mechanical Seal	Graphite and Ceramic
Motor Housing	Aluminum

Technical Features

Motor Characteristics

- Asynchronous, two-pole motor
- Single-phase version
- Built-in thermal protection
- Continuous operation rated

Protection & Insulation

55 IP

IP Protection Class

0 F
