

Thermosetting Powder Paint High-Speed Mixer

High-speed mixer designed for the production of thermosetting powder paints. The system ensures consistent quality and particle size distribution with its robust construction, powerful motor, and integrated control panel.

Product Overview

High-Speed Thermosetting Powder Mixer

This high-speed mixer is specifically engineered for the efficient processing of thermosetting powder paints. It is designed to handle solid, coarse, and lumpish multi-component materials, effectively crushing and homogenizing ingredients during the mixing cycle. The system ensures superior dispersion of pigments and chemical auxiliaries, resulting in consistent output quality.

Technical Features

Operational Capabilities

- Crushing of lumpish materials during mixing
- Homogeneous dispersion of pigments
- Uniform blending of chemical auxiliaries
- High-speed rotation for accelerated production

Sealing Integrity

Yes

Maintenance and Design

Design Advantages

Easy-to-dismount, Robust construction, Leak-proof sealing, Precise control
