Product Overview

High-Efficiency Temperature Control

This thermostatic radiator valve (TRV) provides precise temperature regulation for individual radiators in hydronic heating systems. Featuring a high-quality liquid sensor and an A-rated energy grade, it automatically adjusts water flow to maintain consistent room comfort while significantly reducing energy consumption. The durable brass construction and polished chrome finish ensure both long-term reliability and a modern aesthetic for any interior.

Key Features

Energy Efficiency

A-rating Energy Grade • EN-215 Certified

Performance Highlights

14 Years

Years of R&D

Technical Specifications

Installation Dimensions

Parameter	Value
Overall Height	133mm
Connection Size	DN15 / G1/2
Pipe Compatibility	15mm
Body Material	Brass

Design & Build

Available Orientations

- Straight
- Angle

Surface Treatment

Chrome Plating Polish, Water Polish Chrome Plating

Components

In-house Manufactured Components

- Liquid Sensor
- Valve Head
- Valve Body

Operation

Control Type

Self-regulating thermostatic head with numerical scale (1-5)

Automatic Regulation

Yes
