

Thermostatic Radiator Valve with Liquid Sensor

This thermostatic radiator valve uses a liquid sensor to control temperature. It features a plastic head.

Product Overview

High-Efficiency Temperature Control

This Thermostatic Radiator Valve (TRV) is designed for precise temperature control of individual radiators in hydronic heating systems. Featuring an integrated liquid sensor and an A-rated energy efficiency grade, it ensures optimal comfort while reducing energy consumption. All key components, including the head, body, and sensor, are manufactured and calibrated in-house to meet rigorous quality standards.

Performance & Certification

Energy Efficiency

A-rating • EN-215 Certified

Sensor Technology

Liquid Sensor

Technical Dimensions

Physical Dimensions

127 mm
Total Height

49.5 mm
Top Diameter

Connection Details

Specification	Value
Nominal Diameter	DN15
Thread Size	G1/2
Connection Type	G1/2

Design & Construction

In-House Components

- Liquid sensor
- Thermostatic head
- Valve body

Valve Body Material

Brass or corrosion-resistant metal

Operation

Temperature Settings

Numbered 1-5 with comfort levels

Flow Direction

Yes
