

Thermostatic Radiator Valve with Liquid Sensor

This thermostatic radiator valve uses a liquid sensor to control temperature. It features a plastic head for adjusting the desired temperature.

Overview

High-Efficiency Temperature Control

This Thermostatic Radiator Valve (TRV) is designed for precise room temperature regulation by controlling hot water flow. Featuring an integrated liquid sensor and an A-rating energy grade, it ensures optimal heating efficiency. All key components, including the sensor, head, and body, are manufactured and calibrated in-house to meet rigorous EN-215 certification standards.
