

Thermostatic Radiator Valve

This thermostatic radiator valve is designed for controlling room temperature in heating systems. It is adapted for flow control and energy efficiency in residential and commercial heating applications.

Product Overview

Precision Temperature Control

This thermostatic radiator valve (TRV) is designed for efficient temperature regulation in both residential and commercial heating systems. Featuring a user-friendly control knob with calibrated settings, it ensures optimal comfort and energy savings. Built with high-quality brass components and durable EPDM seals, this valve offers reliable performance and long-lasting durability in demanding heating environments.

Technical Specifications

Working Pressure

1.6 Mpa
Max Pressure

Pipe Thread Standard

ISO 228

Nominal Diameter (DN)

DN15 - DN25

Operating Temperature

120

Materials & Construction

Material Composition

Component	Material
Valve Body	High Quality Brass
Stem / Ball	High Quality Brass
Seal	EPDM
