

Thread Breakage Detection Board for Textile Machines

This board detects thread breakage in industrial sewing and textile machinery. It incorporates electronic components like resistors, capacitors, integrated circuits, and connectors for machine control system integration.

Product Overview

Industrial Thread Monitoring Solution

The Thread Breakage Detection Board is an essential electronic component designed for industrial textile and sewing machinery. It provides reliable monitoring to identify thread breakage in real-time, ensuring machine efficiency and minimizing production downtime. This board integrates seamlessly into existing control systems, featuring robust electronic circuitry for accurate performance.

Technical Specifications

Application

Industrial Sewing • Textile Machinery • Thread Breakage Detection

Model Number

EF120B-0400

Production Date

March 2005

Part Identifier

2P16438A

Electronic Components

Resistors, Capacitors, Integrated Circuits, Connectors
