

Thread Screw Rolling Machine

This thread screw rolling machine efficiently forms threads on metal workpieces through a cold-forming process. Adjustable rolling pressure and speed settings accommodate different thread sizes and material hardness.

Machine Overview

Precision Thread Rolling Capability

This thread screw rolling machine utilizes a high-performance cold-forming process to create precise threads on metal workpieces. Featuring a robust casting closed frame structure, it offers superior rigidity and stable precision during operation. The machine is versatile, supporting various rolling tasks including thread creation, straightening, and processing of small die screws.

Technical Specifications

Operational Controls

- Adjustable rolling pressure
- Adjustable operating speed
- User-friendly control interface

Construction	Casting closed frame
Drive Mechanism	Hydraulic
Processing Applications	Thread Rolling, Small Die Screw Production, Workpiece Rolling, Straightening
