

Thread Take-Up Mechanism for Textile Machines

This mechanism is designed for taking up thread in textile machines. It features a metal arm with a clamp at one end and a toothed, rubberized grip at the other.

Product Overview

Precision Thread Take-Up Mechanism

This thread take-up mechanism is a critical component designed for industrial textile machinery, such as sewing machines. It features a robust metal arm construction with a specialized clamp assembly, ensuring consistent tension control during operation. The design includes a toothed, rubberized grip to prevent slippage and maintain fabric integrity, making it an essential replacement or upgrade part for high-performance textile equipment.

Technical Specifications

Key Features

- Toothed grip design for enhanced traction
- Adjustable clamp mechanism
- Screw-secured assembly
- Industrial-grade durability

Component Type	Thread Take-Up Mechanism
Set Configuration	B Set (2-piece assembly)
Material Composition	Metal, Rubberized Grip
