

Threaded Metal Flange Connector

This flange connector is constructed from a durable metal. It features a threaded central bore and evenly spaced mounting holes for secure connections of pipes or other machinery components.

Product Overview

Industrial Threaded Flange Connector

This high-quality threaded metal flange connector is engineered for reliable pipe and mechanical component integration in industrial environments. Featuring a precision-machined central threaded bore and a robust perimeter of mounting holes, it ensures secure and leak-resistant connections. Its durable metallic construction is designed to withstand demanding operational conditions, making it an essential component for fluid handling and structural piping systems.

Technical Specifications

Material

Metal

Design Features

- Threaded central bore
- Evenly spaced mounting holes
- Industrial-grade construction

Connection Type

Threaded

Typical Applications

Piping Systems, Mechanical Assembly, Fluid Handling
