

Three-Core Communication Cable

This communication cable features three color-coded conductors within a black outer jacket. It is designed for multi-conductor shielded wiring in various communication applications.

Overview

High-Performance Three-Core Communication Cable

This three-core communication cable is designed for reliable signal transmission in professional environments. Featuring color-coded conductors in red, blue, and yellow, it allows for easy identification and installation. The robust black outer jacket provides excellent protection, while the metallic compression fitting ensures secure connectivity for multi-conductor shielded wiring applications.

Core Components

Number of Cores

3
Cores

Conductor Material	Copper
Conductor Identification	Red, Blue, Yellow

Physical Characteristics

Outer Jacket Color	Black
Attachment Type	Metallic compression fitting

Applications

Recommended Use

- Communication systems
- Multi-conductor shielded wiring
- Signal transmission

Technical Features

Wiring Configuration
Multi-conductor • Shielded
