

Three-Phase AC Induction Motor

These three-phase AC induction motors are suitable for driving various types of machinery and equipment. The motors are available in different frame sizes and power ratings to meet specific application requirements, ensuring stable and consistent power output.

Product Overview

Industrial Series Y2 Induction Motors

The Series Y2 three-phase AC induction motors are engineered for demanding industrial environments requiring reliable performance and high efficiency. Featuring robust construction and an optimized cooling system, these motors provide stable and consistent power output for a wide range of machinery. Designed to meet international standards, they offer versatility through various frame sizes and power ratings to accommodate specific application needs.

Technical Specifications

Key Features

- Robust construction
- Optimized cooling system
- High energy efficiency
- Versatile frame sizes

Motor Type	Three-phase AC induction motor
Series	Y2
Standards Compliance	International Standards
