

Three-Phase Asynchronous Electric Motor

This series of energy-efficient three-phase asynchronous motors is designed for diverse industrial applications. These motors are built for reliability and performance, ensuring optimal energy consumption and long-lasting operation.

Overview

High-Efficiency Industrial Motor

This series of three-phase asynchronous motors is engineered for demanding industrial applications requiring reliability and consistent performance. Designed with energy efficiency as a core focus, these units help optimize power consumption while maintaining smooth, long-lasting operation. They are versatile enough to power a wide range of machinery and equipment, making them an ideal choice for diverse industrial environments.

Technical Specifications

Efficiency Rating

Energy Efficient

Suitable Applications

- Industrial Machinery
- Manufacturing Equipment
- General Industrial Use

Motor Type

Three-Phase Asynchronous
