

Three-Phase Asynchronous Generator for Irrigation

This three-phase asynchronous generator is designed for drainage and irrigation machinery. Its durable construction ensures reliable performance in demanding agricultural applications.

Product Overview

Professional Agricultural Generator

This three-phase asynchronous generator is engineered specifically for demanding agricultural environments, including drainage and irrigation systems. Its robust design provides consistent and stable power output, ensuring reliable operation for pumps and heavy-duty equipment. Built for longevity and high efficiency, it serves as a dependable power source for critical farming infrastructure.

Technical Specifications

Power Configuration	Three-phase
Generator Type	Asynchronous

Applications

Primary Applications	Irrigation, Drainage, Water Pumping, Agricultural Machinery
