

Three-Phase Electronic Prepaid Energy Meter

This three-phase prepaid electric energy meter (type B, a card table) uses an advanced three-phase special measuring chip and large scale integrated circuit. It utilizes digital processing technology and SMT technology.

Product Overview

Advanced Three-Phase Prepaid Metering

The DTSY188 / DSSY188 is a reliable three-phase four-wire electronic prepaid energy meter. Utilizing advanced measurement chips and SMT technology, it offers precise electricity consumption tracking and efficient prepayment management. This device is designed for professional utility applications requiring robust digital processing and status monitoring.

Technical Specifications

Pulse Constant

3200 imp/kWh
Pulse Constant

Voltage Rating	3x220/380V
Current Rating	3x1.5(6)A
Frequency	50 Hz

Compliance and Standards

Compliance Standards	GB/T 18460.3-2001
Manufacturing License	Y600000252÷

Device Features

Key Features

- Digital display
- Pulse indication
- Status alerts
- Three-phase four-wire configuration
- Prepaid card interface
