

# Three-Phase Four-Wire Active Energy Meter

The DT862-type B three-phase four-wire active energy meter combines long life technology with regular watt-hour meter features. This electric energy meter is designed for measuring electrical energy consumption.

## Overview

### Three-Phase Four-Wire Active Energy Meter

The DT862-type B is a high-performance active energy meter designed for precision measurement in industrial and commercial applications. Engineered with long-life technology, this three-phase four-wire meter offers reliable performance for 50Hz AC power systems. Its robust design ensures accurate energy consumption monitoring across a wide range of operational conditions.

## Technical Specifications

Voltage Rating	3x220/380V
Current Rating	3x5(20)A
Operating Frequency	50 Hz
Impulse Constant	200r/kWh
Compliance Standards	GB/T15283-1994

## Display & Measurement

### Core Operational Metrics

**50 Hz**

Frequency

**200 r/kWh**

Impulse Constant

Measurement Range	10 to 100000 kWh
