

Three-Phase Motor Automatic Control Box

Automatic control box designed for three-phase motors up to 9.2kW. It is suitable for pump applications, providing automatic control for efficient operation.

Product Overview

Professional Pump Control Solution

The DYA-T02 automatic control box is specifically engineered for high-performance three-phase motor applications. Designed to handle power requirements up to 9.2kW (12.5HP), this unit provides reliable automated management for pump systems. It is built to industry standards to ensure safety and efficient operation in demanding industrial or commercial environments.
