

Three-Phase Motor Control Box for Pumps up to 7.5kW

This control box enables manual operation of three-phase motors. It is designed for motor power no more than 7.5 kW (10 HP).

Overview

Professional Pump Control Solution

This three-phase motor control box is engineered for reliable manual operation of pump motors. It is specifically designed to handle power requirements up to 7.5kW (10HP), making it a versatile choice for a wide range of pumping applications. The unit features robust construction and adheres to international safety and quality standards to ensure dependable performance in professional environments.
