

Three-Pole Electrical Contactor

This three-pole contactor is an electrical switching device used for remotely controlling an electrical circuit. It is designed to handle high current loads and is commonly used in motor control, lighting, and heating applications.

Product Overview

Industrial Switching Solution

The 3SC8-F225 is a robust three-pole electrical contactor engineered for reliable remote control of electrical circuits. Designed for demanding industrial environments, it excels in high-current load applications such as motor control, lighting systems, and heating installations. Its compact design and integrated auxiliary contacts make it a versatile choice for seamless integration into complex control panels.

Technical Specifications

Model Number	3SC8-F225
Number of Poles	3
Standards Compliance	CE, IEC60947-4-1
Terminal Type	Screw Terminals

Applications & Features

Common Applications

- Motor Control
- Lighting Systems
- Heating Applications

Key Features

- Auxiliary contacts for control and indication
- Compact design for space-saving installation
- Durable construction for industrial use
