

Three-Port Stainless Steel Pneumatic Valve

This pneumatic valve is constructed from stainless steel and features a body with three ports. It is designed for controlling the flow of compressed air or other gases in pneumatic systems.

Product Overview

Three-Port Stainless Steel Pneumatic Valve

This high-performance three-port pneumatic valve is engineered for demanding industrial environments where reliability is paramount. Constructed from premium stainless steel, it offers exceptional resistance to corrosion and wear, ensuring longevity in harsh operational conditions. Designed for precise flow control of compressed air and gases, this valve is an essential component for automated pneumatic circuits and industrial control systems.

Technical Specifications

Key Features

Corrosion Resistant • Durable Construction

Number of Ports	3
Material	Stainless Steel
Primary Application	Pneumatic Systems, Gas Flow Control, Industrial Automation
