

Three-Roll Rubber Calender

This three-roll rubber calender is designed for processing rubber materials with precision. Its robust construction and accurate controls allow for the production of high-quality rubber sheets.

Product Overview

Professional Three-Roll Rubber Calender

This industrial three-roll rubber calender is engineered for precise rubber material processing, including sheet production, fabric coating, and embossing. Featuring a robust construction with heavy-duty rolls, it ensures consistent material thickness and superior surface finish. The integrated drive system and advanced control mechanisms provide efficient power transmission and accurate temperature management for high-quality output.

Technical Specifications

Key Operational Features

- Precise roll temperature control
- Adjustable roll gap
- Single-roll speed ratio transmission
- Integrated safety systems

Roll Configuration	3-Roll
Drive System	Universal joint power transmission

Applications

Primary Applications	Sheet Production, Fabric Coating, Embossing, Rubber Processing
