

Three-Section Drum Burner Assembly

This is a three-section burner assembly designed for heating applications. It features multiple burner elements arranged in a row with a corrugated design, ensuring efficient heat distribution.

Product Overview

Professional Three-Section Burner Assembly

This robust three-section drum burner assembly is engineered for high-performance heating applications. Featuring a durable metal construction with precision-designed elements, it ensures optimal heat distribution and reliability in demanding industrial environments. The system supports segmented combustion control and is compatible with both L.P.G and N.G, providing versatile fuel options for varied operational requirements.

Technical Specifications

Supported Fuels

- L.P.G
- N.G

Combustion Features

Segment Control, Complete Combustion, High Efficiency

Design and Build

Construction

Three-section drum assembly with corrugated burner elements

Control Type

Manual key-operated valve
