

Three-Valve Compound Mining Equipment

This three-valve compound mining equipment is designed for metallurgy and mining engineering. It is suitable for foreign engineering contracting, particularly in coal mine settings.

Product Overview

Industrial Compound Mining Solution

This three-valve compound mining equipment is engineered for high-performance metallurgy and mining applications. Specifically designed for non-metal mining engineering, it offers robust reliability for complex extraction environments. It is well-suited for international engineering contracting and large-scale coal mining projects requiring efficient flow control.

Technical Specifications

Valve Configuration	3
---------------------	---

Application Suitability

Project Scope

International Engineering Contracting • Large-scale Coal Mining

Suitable Industries	Metallurgy, Mining Engineering, Nonmetal Mining, Coal Mining
---------------------	--

Equipment Identification

Series Identifier	DZF
-------------------	-----
