

Three-Way Electric Actuated Ball Valve

This three-way ball valve is equipped with an electric actuator. Its stainless steel construction and threaded connections make it suitable for industrial applications requiring precise flow control and automated operation.

Product Overview

Precision Flow Control

This three-way electric actuated ball valve is engineered for demanding industrial environments requiring reliable, automated fluid management. Constructed from high-grade stainless steel, it ensures durability and resistance against corrosion in various piping systems. The integrated electric actuator provides precise, remote-controlled operation, making it an ideal solution for complex flow diversion and mixing applications.

Technical Specifications

Material

Stainless Steel

Valve Configuration

Three-way

Connection Type

Threaded

Operation

Electric Actuated

Key Features

Suitable Applications

Industrial Automation, Flow Control, Fluid Diversion
