

Thyristor MIG/MAG Semi-Automatic Welder

This thyristor-controlled MIG/MAG semi-automatic welder is designed for industrial use. It provides stable arc characteristics and reliable performance for efficient welding operations across various tasks.

Overview

Industrial Thyristor Welding Solution

The NBC-R series is a robust thyristor-controlled MIG/MAG semi-automatic welding machine engineered for demanding industrial environments. Designed for heavy fabrication, automotive, and general manufacturing, it delivers stable arc characteristics and consistent performance. This unit supports adjustable welding parameters to ensure high-quality results across a variety of welding tasks.

Technical Specifications

Welding Process	MIG, MAG, Manual Welding
Control Technology	Thyristor-controlled
Model Identifier	NBC-630R

Key Features

Performance Metrics

630 A

Rated Current

Recommended Applications

- Heavy Fabrication
- Automotive Manufacturing
- General Industrial Manufacturing
